FORETHOUGHT INNOVATION

Encouraging Suggestive Behavior

Encouraging Suggestive Behavior

by Barry Nalebuff and Ian Ayres

The company suggestion box poses a be-careful-what-you-wish-for dilemma. You want lots of ideas, but what happens when you get them? Responding to each suggestion is costly, especially if someone has to identify the right person to evaluate it. If one idea in ten is worth pursuing, that's a great outcome for management but a demoralizing one for the large majority of employees whose brainchilders are rejected. And because employees don't know why their ideas failed, they don't learn how to come up with better ones.

Instead of funneling suggestions to designated experts, why not borrow a page from the open source movement and turn your workforce into critics and codevelopers of their peer's ideas? Several universities, as well as companies such as Kodak and Biotece Webster, have built "open" suggestion boxes on their networks and invited their whole organizations to weigh in. Staff evaluate, comment on, and improve their peer's submissions. Employee rankings then filter those ideas to help management focus on the most promising. Selection is more palatable when served with a reason: Employees who see colleagues' feedback will know their ideas were taken seriously, even if the ideas failed to ignite.

An open suggestion box requires the participatory participation of innovators and constructive critics; fortunately, their incentive is baked into the model. As with open source development, there are "bugs" which are like a community innovation blog—contribute the kinds of people who enjoy solving problems and sharing their solutions. Participants earn a reputation for brilliant ideas, for insightful commentary, for taking an idea that merely hums and making it sing. Then there's the thrill of agglomeration (the "hacker tag" or "egg boiler") that occurs when an idea is implemented and its inventor gets the credit.

Not every idea belongs out in the open, and so corporate suggestion boxes are naturally restricted to employees. Interested organizations can find models on the Web. Why not, for example, a public site we developed that is based on the same software that some companies use internally, and gives the flavor of how discussion improves ideas. Take the simple notion that brake lights should shine brighter when the driver slams down his foot. The Whynot community has suggested scores of improvements. Should the brake lights change color? Should they flash? Should there be a reinforcing horn as well?

More inspiration can be found at Halftalkers.org, which specializes in slightly off-the-radar ideas such as perishable cream cheese patties with a precise hole to put on bagels. There's also Thinkstock. org, Premiseprises.com, Spotfiddorgan, Globalideabank.org, and Create-youridea.com.

Corporations' open idea boxes have produced such improvements as expense reimbursement being added to payroll deposits, a central reservation system for meeting rooms and hotel-sponsored classes in reading and understanding monthly financial reports.

There is no one-size-fits-all suggestion box, and companies can customize their own categories with employees' help. For example, Yale University's internal idea site invites users to point out dumb stuff it does under the heading "Bruce Process" (Management responds either by fixing the process or by explaining—to everyone at once—why the process isn't so dumb after all.) The leading "Unsolved Problems" identifies questions that would be valuable to solve. Two headlines should appear in every open idea box: "We've Done It" and "We're Doing It." That's how management demonstrates it has created an incubator, not another black hole.

Barry Nalebuff (bary.nalebuff@yale.edu) is the Milton Steinman Professor of Management at Yale School of Management. Ian Ayres (ian.ayres@yale.edu) is the William K. Townsend Professor of Law at Yale Law School.
Harvard Business Review OnPoint articles enhance the full-text article with a summary of its key points and a selection of 10 company examples to help you quickly absorb and apply the concepts. Harvard Business Review OnPoint collections include three OnPoint articles and an overview comparing the various perspectives on a specific topic.

Further Reading
The Harvard Business Review Paperback Series

Here are the landmark ideas—both contemporary and classic—that have established Harvard Business Review as required reading for businesspeople around the globe. Each paperback includes eight of the leading articles on a particular business topic. The series includes over thirty titles, including the following best-sellers:

Harvard Business Review on Brand Management
Product no. 1445

Harvard Business Review on Change
Product no. 8842

Harvard Business Review on Leadership
Product no. 8834
